Applicant Name: Jose Mari Bulawan Delfin

Contact: binarymako@snowkel.us / 09225205353 (SUN)

Experience:

VPN and Tunneling: I've used OpenVPN before and a little bit experience on IPSec for Penetrating for an Internet Connection because basically before we we're a moderate family and I but my parents can afford a mild Internet Connection, I however wanted to access for a free one even with a Promo. So, I have managed to research a bit about VPNs as before I and my brother started tinkering on Hotspot Shield a VPN Suite before OpenVPN and maybe IPSec. For Tunneling I've tried Port Forwarding on OpenVPN however for IPSec I've never even experienced modifying / configuring for one, so just point me to the right direction and I'd gladly research and help.

Intranet and LAN or Site to Site: I've searched about various Cloud Solutions before like Google Drive, SMB and Windows RDP or let's just say SMB like, However I have experienced Port Forwarding for a Local Site to Cloud Site Hosting before for my websites. I've never experienced creating a VPN Solution for this since I didn't focus much on free and reliable internet on my side. For Port Forwarding someone in the later years taught me about IPTables or guided me there as I wasn't really taught much about it. But for VPN Solutions we can use a Mikrotik Router or Hardware for that like PisoWiFi..

Also note, I've tinkered around PisoWiFis before and much on theory since I studied much about CISCO and Networking stuff for my Internet Connection in my house. Anyways, I got my CISCO training from Netacad on Asian College of Technology near Elizabeth Mall in Cebu City but never got the copy of my CISCO Certificate from Instructor since I was very busy. I do have experience on Networking since about Routers and Switches like LAN and WAN and even WWAN (Wireless Wide Area Network).
